EXECUTIVE PROFILE

Technical Program Manager with 12+ years across software engineering, enterprise release operations, DevOps, and product, application, and cloud security. Drives high-stakes launches, engineering execution, security risk reduction, and actionable leadership reporting across organizations of 100+ teams. Combines hands-on technical fluency with AI-enabled workflows and operational visibility.

TECHNICAL & PROGRAM CAPABILITIES

Engineering & delivery: Release management, CI/CD, production deployment, technical program execution, dependency and risk management, engineering quality, executive reporting, mentoring.

Platforms: Jira, JQL, Confluence, Jira Service Management, Lucid, Smartsheet, Jenkins, Artifactory, ServiceNow, New Relic, Datadog, Firebase Analytics, Crashlytics, TestFlight, Zephyr.

Security & AI: Product, application and cloud security; DAST, MAST, penetration testing, container security, threat modeling, Arkose, Copilot, Claude, Claude Cowork, MCP, Snowflake, Power BI.

PROFESSIONAL EXPERIENCE

WARNER BROS. DISCOVERY | Silver Spring, MD | Jul 2023–Present

Technical Program Manager | Product, Application & Cloud Security Lead cross-functional security programs spanning 100+ global teams, connecting product delivery, launch readiness, remediation, and executive decision-making.

- Drive security readiness for WB Games, Direct-to-Consumer and CNN launches, resolving dependencies, tracking security exposure and advancing remediation against release milestones.
- Partnered with WB Games on the Dragonfire launch to surface, prioritize and drive closure of pre-launch vulnerabilities with security and engineering owners.
- Led security engagement for the HBO Max rebrand, CNN on Max, Max LATAM and EMEA launches, MML 2024 and 2025, and the Paris 2024 Olympics.
- Directed security preparedness for CNN All Access and CNN Midterms; led cross-functional tabletop exercises ahead of All Access to validate response readiness and identify launch risks.
- Developed AI-assisted Jira reporting and dashboards, validating underlying source data to surface security operations metrics, delivery progress and leadership decisions.
- Consolidated WBD Security project information into a technology landscape map showing tools used across teams, connected data sources and MCP usage, providing a single-view picture of the organization’s technical reach.
- Unified project plans, Gantt timelines, upcoming milestones, performance metrics and overall progress in one leadership view; advanced AI-driven epic and story generation to reduce manual work.
- Translate threat-model findings into targeted Application Security testing scope, including penetration-test scenarios mapped to threats and attack paths.
- Drive Product and Cloud Security workstreams through clear scope, ownership, delivery milestones, risks and cross-team dependencies; deliver executive reporting on readiness and remediation.
- Established a repeatable security intake and assessment model for 200+ product and engineering teams using DAST, MAST, penetration-testing and container-security questionnaires.

CAPITAL ONE | McLean, VA | Mar 2019–Mar 2023

Senior Manager | Technical Program Management Owned recurring releases for flagship iOS, Android and web applications serving millions of customers, aligning 100+ platform and feature teams.

- Directed weekly web and twice-monthly iOS/Android release cycles, aligning platform validation, feature readiness and production rollout to avoid critical release defects.
- Initiated and launched an internal solution that automated 100% of previously manual web-release steps; defined expansion opportunities for mobile platforms.
- Built an in-house release rotation capability and trained three associates to own production releases end to end.
- Used Jenkins, New Relic, Crashlytics and Firebase Analytics to assess deployment outcomes, application health and customer-impacting release signals.
- Converted release performance data and customer feedback into prioritized reliability and delivery improvements.
- Presented release readiness, technical risks, mitigation options and timeline changes to senior leaders.

- Translated complex engineering initiatives into owned deliverables, implementation plans and trackable dependencies across teams.
- Maintained delivery plans, requirements, risk registers and status reporting to support predictable execution.

JACOBS ENGINEERING (FORMERLY BLUE CANOPY) | NSF | May 2015–Mar 2019

Scrum Master | Federal Grants Platform Modernization Supported engineering delivery and federal stakeholder alignment for modernization of the National Science Foundation's legacy grants application.

- Managed engineering work intake, priorities, delivery commitments and cross-team dependencies across a modernization program involving 10+ teams.
- Worked with product owners and federal stakeholders to refine requirements, reprioritize the technical backlog and track implementation progress.
- Built Jira epics, stories, Zephyr test scripts and delivery reporting to track engineering throughput and release readiness.
- Contributed modern UI development to upgrade legacy application functionality.
- Introduced regular engineering quality reviews for four developers, contributing to 100% unit-test coverage and a 93% Sonar rating.
- Trained teams of up to 15 on JavaScript-based technology stacks and modern software delivery practices.

3H SYSTEMS | EPA | Jan 2013–May 2015

Software Consultant | Full-Stack Engineering Developed UI enhancements and backend integrations for an EPA legacy application.

- Built application functionality using Java and JavaServer Faces (JSF).
- Partnered with QA, systems analysts and database administrators to prepare application deployments.
- Worked with the National Computer Center (NCC) to execute production releases.

UNIVERSITY OF TOLEDO | Sep 2010–Dec 2012

Research / Teaching Assistant

- Researched battery-health optimization algorithms for plug-in hybrid electric vehicles; presented findings at two IEEE conferences.
- Worked with university IT to troubleshoot defects in the student portal.

EDUCATION

MBA | Robert H. Smith School of Business, University of Maryland

MS, Electrical Engineering | University of Toledo — Outstanding Teaching Assistant, College of Engineering

BTech, Electrical Engineering | West Bengal University of Technology

CERTIFICATIONS

AWS Certified Cloud Practitioner | Certified ScrumMaster (Scrum Alliance) | SAFe Agilist (Scaled Agile) | Team Kanban Practitioner
